DETAILED ACTION

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-6, 7-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Allie et al (5400417) in view of Givehchi (US2003/0002118). For claims 1 and 7, Allie et al disclose in fig. 2 a Mach-Zehnder modulator with a dither signal applied to the DC bias which is then optically detected, but there is no distinct showing that the detected component is synchronous with the dither signal. However, Givehchi in a similar system discloses in [0023] a synchronous demodulation system for the detected optical component, and one skilled in the art would want to use Givehchi in Allie et al because one obtains a smoother and more automatic control over the bias point of the modulator. Allie et al also show in fig. 2 the development of an error signal for the feedback circuit. In col. 6, lines 66-69, Allie et al discuss different dither signal generator means and one skill in the art can choose a means without undue experimentation that best optimizes the system.
3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Kimmitt et al show a similar dither bias system see [0033].
